

# Project Title

Design and Prototype a Smart UAV Monitoring Dashboard using Figma

---

## Project Objective

To design a **user-friendly, efficient, and visually appealing interface** for monitoring UAV operations, applying **HCI principles** such as usability, consistency, feedback, and accessibility.

---

## Project Description

Use Figma to design a **complete UI prototype** for a UAV monitoring system that includes:

- Real-time UAV status
  - Wind/weather alerts
  - Navigation controls
  - Emergency response interface
- 

## Functional Requirements

Your UI must include at least **5 screens**:

1. **Login Screen**
  - Username/password
  - “Remember me” option
2. **Dashboard Screen**
  - UAV status (battery, altitude, speed)
  - Map view (mock layout)
3. **Wind Alert Screen**
  - Warning messages
  - Visual indicators (colors/icons)
4. **Control Panel**
  - Start/Stop UAV
  - Emergency landing button
5. **Report/History Screen**
  - Past flight logs

- Performance graphs (mock UI)
- 

## Design Requirements

- Use **consistent color scheme and typography**
  - Apply **visual hierarchy**
  - Include **icons and proper spacing**
  - Ensure **accessibility** (readable fonts, contrast)
- 

## HCI Concepts to Apply

Must clearly demonstrate:

- **Usability attributes** (efficiency, learnability)
  - **Feedback** (alerts, confirmations)
  - **Consistency**
  - **Error prevention** (confirmation dialogs)
  - **Keyboard accelerators (optional)**
  - **Pointer design concepts (hot-spot awareness)**
- 

## Tasks to Perform

1. **Wireframing (Low-Fidelity Design)**
2. **High-Fidelity UI Design in Figma**
3. **Interactive Prototype (Clickable links)**
4. **Usability Evaluation Plan**

## Submission Requirements

- Figma design link
  - PDF report including:
    - Screenshots of all UI screens
    - Explanation of design decisions
    - Usability attributes (now level, planned level, etc.)
-

## Sample Usability Evaluation (For example: to include in report)

| Attribute         | Value                |
|-------------------|----------------------|
| Measuring Concept | Task completion time |
| Measuring Method  | User testing         |
| Now Level         | 12 sec               |
| Planned Level     | 8 sec                |
